Abstract

Aims: This article aims to create a taxonomy of evidence-based medical eXtended Reality (MXR) applications, including Virtual Reality (VR), Augmented Reality (AR), Mixed Reality (MR), and 360-degree photo/video technologies, to identify best practices for designing and evaluating user experiences and interfaces (UX/UI). The goal is to assist researchers, developers, and practitioners in comparing and extrapolating the best solutions for high-precision MXR tools in medical and wellness contexts.

Methods: To develop the taxonomy, a review of medical and MXR publications was conducted, followed by three systematic mapping studies. Applications were categorized by end-users and purposes. The first mapping cross-referenced digital health technology classifications. The second validated the structure by incorporating over 350 evidence-based MXR apps, with input from twenty XR-HCI researchers. The third, ongoing mapping adds emerging apps, refining the taxonomy further.

Results: The taxonomy is presented in a dynamic database and 3D interactive graph, allowing international researchers to visualize and discuss developed evidence-based medical and wellness XR applications. This formalizes prior efforts to distinguish validated MXR solutions from speculative ones.

Conclusion: The taxonomy focuses solely on evidence-based applications, highlighting areas where VR, AR, and MR have been successfully implemented. It serves as a tool for stakeholders to analyze and understand best practices in MXR design, promoting the development of safe, effective, and user-friendly medical and wellness applications.

Keywords: MXR, evidence-based, taxonomy, high-dexterity, high-precision; high-empathy

1 Introduction

American English is desirable. Abbreviations should be spelled out when first used. If non-English words are used,

2 Major Headings

Major headings should be typeset in boldface, with each initial letter of individual word should be capitalized (see example above).

© The Author(s) 2025. This is an Open Access article licensed under a Creative Commons Attribution 4.0 International License (<https://creativecommons.org/licenses/by/4.0/>), which permits unrestricted use, sharing, adaptation, distribution and reproduction in any medium or format, for any purpose, even commercially, as long as you give appropriate credit to the original author(s) and the source, provide a link to the Creative Commons license, and indicate if changes were made.

2.1 Subheadings

Subheadings should be typeset in boldface, with the first letter of each word capitalized (see example above).

2.1.1 Sub-subheadings

Sub-subheadings should be typeset in italics only, with only the first word capitalized (see example above).

2.2 Numbering and Spacing

Sections, sub-sections and sub-subsections should be numbered in Arabic. Flush left all paragraphs that come after each section headings.

2.3 Lists of Items

Lists may be laid out with each item marked by a dot:

- item one,
- item two,
- item three.

Items may also be numbered in lowercase Roman numerals:

- 1) item one,
 - 2) item two,
- (a) lists within lists can be numbered with lowercase Roman letters,
(b) second item.
- 3) item three.

3 Equations

Equations should be punctuated and aligned to bring out their structure and numbered on the right. The equations should be numbered consecutively within each section. Hence the equations under section 2 should be labelled equation (3.1), equation (3.2), *etc.* Use \times rather than a centered dot, except for scalar products of vectors. The solidus (/) should be used instead of builtin fractions in running text, and in display wherever clarity would not be jeopardized.

$$A = \pi r^2 \tag{3.1}$$

Equations should be written in abbreviated form. Ensure that the symbols in your equation have been defined before the equation appears or immediately afterwards.

$$\begin{aligned} A &= \pi r^2 \\ &= \frac{1}{4} \pi d^2 \end{aligned} \tag{3.2}$$

4 Figures

Figures should be inserted in the text as close as possible to the first reference (**Figure 1**). Materials that have been published previously should be accompanied by written permission from the author(s) and publisher.

Figures are to be numbered sequentially in Arabic numerals. The caption is to be left alignment and placed below the figure. Figure captions start with “Figure” in front of the figure number, followed by a period, and the text should be in 10.5 pt Times New Roman. For figures that have more than one part, include the labels “(a)”, “(b)”, etc. (**Figure 2**).

Figure 1. Insert caption, legend and acknowledgement if necessary.

Figure 2. Insert brief title. (a) description of panel a. (b) description of panel b.

5 Tables

Tables should also be inserted in the text as close to the point of reference as possible. Tables should be numbered in a sequential order in the text in Arabic numerals. Table headings should be left alignment above the tables. Do not abbreviate “Table”.

In cases where the tables need to be extended over to the second page, the continuation of the table should be preceded by a caption, e.g., “**Table 1.** (Continued).”. Footnotes in tables should be written in superscript lowercase letters and placed below the table.

Table 1. Insert caption here

2 multiplication table	
2×2	4
3×2	6
4×2	8

6 Footnotes

Footnotes may be added to provide supplementary information that need not appear in the text. They should be used sparingly. Footnotes should be numbered sequentially in superscript Arabic numerals¹. Do not include footnotes in the reference list.

7 Discussion

Discussions should be brief and focused. In some disciplines use of Discussion or ‘Conclusion’ is interchangeable. It is not mandatory to use both. Some journals prefer a section ‘Results and Discussion’ followed by a section ‘Conclusion’. Please refer to Journal-level guidance for any specific requirements.

¹Footnotes should be typeset in 8 pt Times New Roman at the bottom of the page.

8 Conclusion

Conclusions may be used to restate your hypothesis or research question, restate your major findings, explain the relevance and the added value of your work, highlight any limitations of your study, describe future directions for research and recommendations.

In some disciplines use of Discussion or ‘Conclusion’ is interchangeable. It is not mandatory to use both. Please refer to Journal-level guidance for any specific requirements.

Supplementary materials

The supplementary material for this article is available at: [URL](#).

Declarations

Acknowledgements

The acknowledgements section appears just before the references. This is the optional section where the authors could credit others for their guidance or help in writing the manuscript. Funding sources or sponsorship information may be included here too.

Authors contribution

Single author;

The author contributed solely to the article.

Two or more authors:

Made substantial contributions to conception and design of the study and performed data analysis and interpretation;

Salas H, Castaneda WV;

Performed data acquisition, as well as provided administrative, technical, and material support: Castillo N, Young V

Conflicts of interest

If there are any potential conflicts of interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results, please declare here.

If not, please write as “All authors declared that there are no conflicts of interest.”.

Some authors may be bound by confidentiality agreements. In such cases, in place of itemized disclosures, we will require authors to state “All authors declare that they are bound by confidentiality agreements that prevent them from disclosing their conflicts of interest in this work”.

Ethical approval

If your study involves humans or human data, then your article should contain an ethics statement which includes the name of the committee that approved your study. If the human data in your research is the secondary data (or a publicly available survey data or census micro sample), the ethics requirement can be waived. Ethics information should include IACUC permit numbers and/or IRB name, if applicable. This information should be included in a subheading labeled “Ethics Statement” after “Author’s Contribution”.

If the manuscript does not involve such issues, please state “Not applicable.” in this section.

Consent to participate

For all research involving human subjects, freely-given, informed consent to participate in the study must be obtained from participants (or their parent or legal guardian in the case of children under 16) and a statement to this effect should appear in the manuscript.

In the case of articles describing human transplantation studies, authors must include a statement declaring that no organs/tissues were obtained from prisoners and must also name the institution(s)/clinic(s)/department(s) via which organs/tissues were obtained.

For manuscripts reporting studies involving vulnerable groups where there is the potential for coercion or where consent may not have been fully informed, extra care will be taken by the editor and may be referred to the Journal Editorial Office.

Consent for publication

Manuscripts containing individual details, images or videos, must obtain consent for publication from that person, or in the case of children, their parents or legal guardians. If the person has died, consent for publication must be obtained from the next of kin of the participant. Manuscripts must include a statement that a written informed consent for publication was obtained. Authors do not have to submit such content accompanying the manuscript. However, these documents must be available if requested.

If the manuscript does not involve this issue, state “Not applicable.” in this section.

Availability of data and materials

This section is optional. The journal encourages all data used in the analysis to be deposited in available public repositories, presented in the main papers or attached as additional supporting files, in machine-readable format whenever possible.

Funding

If there are sources of funding for the study reported, any relevant grant numbers and the link of funder’s website should be provided if any. The role of the funding body in the experiment design, collection, analysis and interpretation of data, and writing of the manuscript should be declared:

This work was supported by Grant name XX (No. XXXX; No. XXX)...

If there is no grant:

None.

Copyright

©The Author(s) 2025.

9 References

Authors should cite references in sequence throughout the manuscript and indicate them in a superscript square bracket with one citation number [1], two separate citation numbers [2,3] or several consecutive citation numbers [4–10]. References should be in numbered order.

Works with 6 or more authors will have only the first six authors named followed by “et al.” in italics as seen in the reference list below. For more details, please click here (https://sciexplor.com/ec/author_instructions) to refer to “2.3.7 References”.

- *We suggest that authors should cite appropriate, traceable and latest references be within recent 5 years;*
- *Each reference should have a corresponding DOI number/website link;*
- *Top six authors’ names should be listed in the references;*
- *The names of journals should be abbreviated according to the style used in Index Medicus*
(<http://www2.bg.am.poznan.pl/czasopisma/medicus.php?lang=eng>).

Appendix A This is the Appendix

Supplementary materials that are excluded in the main body of the paper may be included in the appendices. These include derivations of equations and details of algorithms.

Appendices should be used only when advanced technical details are essential to the paper, and should be included after the References section.

A.1 This is the subappendix

Number displayed equations occurring in the Appendix in this way, e.g., equation (A.1), (A.2).

$$A = \pi r^2 \tag{A.1}$$

A.1.1 This is the sub-subappendix

Appendix B Another Appendix

In cases where there is more than one appendix, they should be numbered alphabetically.

$$A = \pi r^2 \tag{B.1}$$

In-text citations

In-text citations for unpublished works and personal communications should be identified with “(Authors, Year of unpublished works or personal communications, Unpublished)”.

For example, (Chen and Jackson, 1998, Unpublished).

In-text citations that will be listed in the References section should be cited with “(Authors, year of published)” in text citation.

For example, (Chen and Jackson, 1998).
